

Don't Forget About **Your Roots**

Are your roots healthy?

Revitalize your trees and shrubs with soil and root injection.

Soil & root injection is a high-pressure system that injects fertilizer or water 6-8" into the soil surface while also improving aeration.

Your trees & shrubs may be stressed from:

- construction,
- poor site conditions,
- pests and/or disease,
- growing in planters with minimal soil.

Give your plants the benefit of soil and root injection.
